

# Workplace Drug Testing Management

## Drug Testing in the Dark

Does the software you use to manage your drug testing program enable you to:

- Demonstrate to your CEO how the program is meeting its corporate commitments?
- Show your CFO how the testing program's accountability and efficiency have increased quarter over quarter, year over year?
- Prove to your General Counsel that the approved drug testing policies are being universally and scrupulously followed?
- Assure yourself that third party providers are meeting all their contractual service level agreements?

In addition, can your software handle the unique operational challenges of workplace testing? Is your testing performed in multiple locations, by multiple employees who have various levels of training, and various levels of motivation to do it "right"?

Compounding the challenge are the different steps in the testing process (collection, transport, lab analysis, medical review, data analysis) performed by different parties who have little ability to share critical information.

Such complexity creates large risks. Unfortunately, your program operates in a litigious society where the deep corporate pocket is always a target.

Are you drug testing in the dark?

## DAT Information Manager™

### ... Shines the Light

DAT Information Manager™ from Sageful Corporation overcomes these operational challenges while providing a true management solution designed to manage drug testing programs. It is a comprehensive offering specifically created for corporate drugs of abuse testing (DAT) programs.

DAT Information Manager tracks employees, specimens, and results. It generates schedules and analytical reports, creates electronic links

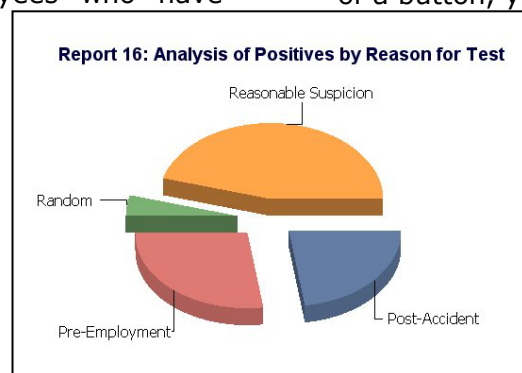

between all parties (collectors, lab staff, medical review officers), automatically alerts responsible parties when critical events occur, and records iron-clad chain of custody evidence. DAT Information Manager shines the light on your corporate drug testing program.

## Increase Drug Testing Program Efficiency

- Automate error-prone, repetitive, manual tasks—from collating disparate data from multiple sources to writing reports—saving significant time while reducing error. Drug test results from third party service providers can be quickly, accurately, and securely imported with a single mouse click. DAT Information Manager reduces paper work and frees time to better meet goals.
- Measure, review and analyze employees, results and service providers. With the click of a button, you can analyze individual and

aggregate employee positives by: drug, location, test type (random, medical, pre-employment, post-accident, etc.) and more.

- Create a single point of management and control and arm yourself with a centralized resource for capturing employee data and drug test results.

## Reduce Legal Liability

- Ensure strict compliance with your corporate drug testing policy. DAT Information Manager leads employees and third parties through the specified work flow of your drug testing policy. And you can easily adapt your drug testing policies to changing business or regulatory requirements.
- Record authoritative chain of custody information—who did what and when during each step in the drug testing process—in an auditable database that time stamps all transactions and can even record employee's digital signatures.

Make your drug testing program shine today with Sageful's DAT Information Manager. Learn more at [www.sageful.com](http://www.sageful.com).
