

# Data Management for MRO's

## Complex Drug Testing Policies?

As a Medical Review Officer in today's modern workplace, you are faced with complex drug testing policies and procedures that often leave you knee deep in phone calls, administration and paperwork. Policies are littered with time restrictions, communication mandates, and process necessities, making them increasingly challenging to follow.

In addition, while your role in a Company's drug testing process or work flow is critical, it is increasingly harder to coordinate, share and analyze information with others in the work flow. This is especially compounded if they are in multiple locations, or are third party providers with isolated, incompatible data management systems.

Such complexity creates large risks, both for you, your program and your company. Unfortunately, we live in a litigious society where adhering to the procedural work flow and strict compliance to the corporate drug testing policy is absolutely essential.

## DAT Information Manager™ ... Manages Complexity

DAT Information Manager™ from Sageful Corporation overcomes these challenges. It is a comprehensive data management offering specifically created for corporate drugs of abuse testing (DAT) programs.

DAT Information Manager creates a centralized "command center" that: tracks employees, specimens, and results; generates schedules and analytical reports; and records iron-clad chain of custody evidence. In addition, it even automatically alerts responsible parties when critical events, such as positive drug tests, occur.

DAT Information Manager breaks down the isolated information "silos" that exist between those involved in drug testing. It allows for the

secure sharing of critical data while ensuring strict adherence to the approved corporate drug testing policy.

## Increase Your Efficiency

- Be electronically alerted to review requests, view digital specimens, and, in *one click*, accept or reject results, order retests, and communicate your decisions to all relevant parties.
- Automate the steps in your drug testing work flow, ensuring your corporate policy is scrupulously followed.
- Securely share donor information, test

results and program analysis with other responsible parties, regardless of their location. Measure, review and analyze employees, results and third party providers.

- Easily generate a wide variety of detailed reports

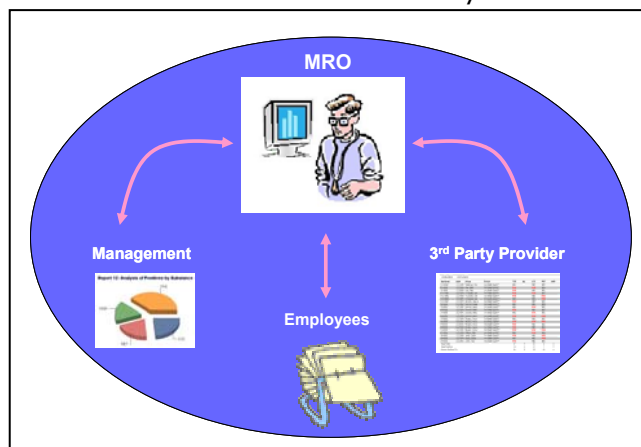

analyzing costs, goals, outcomes and more.

## Reduce Legal Liability

- Ensure strict compliance with your corporate drug testing policy. DAT Information Manager leads employees and third parties through the specified work flow of your drug testing policy. And you can easily adapt your drug testing policy to changing business or regulatory requirements.
- Record authoritative chain of custody information—who did what and when during each step in the drug testing process—in an auditable database that time stamps all transactions and can even record employee's electronic signatures.

Sageful's DAT Information Manager delivers modern data management efficiencies while enhancing your management role in the drug testing program.
