

# TrackMyResults

TrackMyResults™ is a web-based suite of easy-to-use and easy-to-adopt services that manage drug testing programs. TrackMyResults improves client outcomes, increases program efficiencies, reduces liability and raises drug testing return on investment.

With TrackMyResults drug testing data management services, there is no software to purchase, nothing to install and no need to call MIS. TrackMyResults keeps information confidential while making it accessible any time, any where. And there are no large, up front, capital expenses or recurring support and maintenance charges—you only pay for what you use when you use it.

And best of all, TrackMyResults is provided by your trusted drug testing vendor, your testing laboratory or Third Party Administrator (TPA). The people you know, and who know you, manage your account, are there to answer your questions and help you analyze results and improve outcomes. And because TrackMyResults' fees are included in your vendor's charges, you will never receive a separate bill from TrackMyResults.

The three TrackMyResults service offerings—*Lite*, *Essential* and *Production*—provide increasingly valuable levels of drug testing data management power:

## TrackMyResults:Lite™

TrackMyResults:Lite allows you to view your laboratory results online and sort your data by donor, date, panels, results and more. You can run a host of reports that analyze your results and can confidentially communicate with other employees and your drug testing vendor. There is no easier or better web reporting solution online today.

## TrackMyResults:Essential™

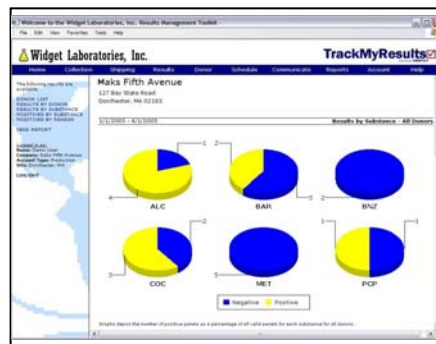

TrackMyResults:Essential includes the web-based result reporting and secure email functionality of TrackMyResults:Lite and adds the additional features required by organizations that want to improve client

outcomes, program efficiencies and ROI. TrackMyResults:Essential manages the overall drug testing program and employs step-by-step Wizards to seamlessly guide users through viewing and sorting results, managing donors, staging collections, shipping specimens, confidential communications and running analytic or trend reports.

## TrackMyResults:Production™

TrackMyResults:Production provides everything in TrackMyResults:Essential while meeting the increased efficiency demands of larger drug testing programs: those that have larger numbers of specimens, donors, users, or sites.

With its extensive bar coding and group testing functionality TrackMyResults:Production is designed to efficiently and quickly process large numbers of donors.

TrackMyResults:Production automatically creates random testing schedules based on program-specific rules. These legally defensible random testing calendars are used to schedule, monitor, analyze and report drug testing attendance and results.

TrackMyResults:Production can automatically notify users via email when: shipments are received, any results are posted, just positive results are posted, or just positives from specific donors are posted. And it even allows Medical Review Officers to log in and: review client and collection data; interpret lab results; reschedule tests; and confidentially communicate with you or your testing vendor.

TrackMyResults:Production has the most extensive set of reports—not only for individual donors but also for groups—and all of them can be confidentially and securely emailed.

TrackMyResults can help manage your drug testing program while improving outcomes and increasing efficiency. For more information, please contact [info@sageful.com](mailto:info@sageful.com), or 508.529.4300 ext 1#.
