Sageful Announces Web-Based System

Sageful Corp., Upton, MA, announced at the Northeast Regional Clinical Laboratory Management Association Conference in Boxborough, MA a new approach to drug testing data management: a Web-based suite of services that manage drug testing programs. TrackMyResults™ On-line Data Management Services improve client outcomes, increase program efficiencies, reduce liability and raise drug testing return on investment (ROI), according to a company press release.

TrackMyResults services do not require software, installation or help from information systems or technology. TrackMyResults keep information confidential while making it accessible any time, any where. There are no large, up front, capital expenses, nor recurring support and maintenance charges, the release stated. TrackMyResults employs step-by-step wizards to seamlessly guide users through the process of viewing results, managing donors, collections and shipping, creating random test schedules and running analytic and trend reports. The three TrackMyResults services offerings include Lite, Essential and Production.
