**DAT Information Manager™: Breakthrough Drug and Alcohol Testing Management
for Workplace, Medical, and Criminal Justice**

New Client Information Management Solution Increases Efficiencies and Improves Outcomes

BOSTON, Mass—June 14, 2004—Building upon its lead in the drug and alcohol testing software market, Sageful Corporation today announced at the Innovative Technology for Community Corrections Conference in Boston, MA the latest release of its sophisticated client information management solution, *DAT Information Manager* version 6.0. *DAT Information Manager* is a comprehensive solution for corporate, medical, and criminal justice DAT (drug and alcohol testing) programs that: manages donors, specimens, results, and schedules; generates regulatory and analytical reports; automatically alerts responsible parties when critical events occur; records iron-clad chain-of-custody evidence; and more.

The new release is eagerly anticipated by customer Stefan LoBuglio, deputy superintendent for community corrections at the Suffolk County Sheriff's Department, "I'm excited by the new possibilities because the version we already have has enabled us to increase program efficiency and improve our client's outcomes. For example, the ability to automatically update drug test results reduces error, saves money and ensures client info is always up-to-date while the automatic alerting of responsible parties whenever there is a positive, enables staff to immediately tackle client lapses preventing small problems from becoming big. And the data that is recorded throughout has helped improve accountability, productivity, and effectiveness."

By empowering employees with the right information at the right time, *DAT Information Manager* improves outcomes and increases employee accountability. Its automation of manual processes saves time and money, reduces error, and increases program efficiency and reputation. *DAT Information Manager* also enhances compliance, increases legal defensibility and reduces the potentially catastrophic risk of a positive result "slipping through the cracks". And its sophisticated analysis of results, donors, and programs can prove all

these benefits and demonstrate to budget setters the positive return attained on a drug testing investment.

DAT Information Manager version 6.0 will be available in July through Sageful's DAT Partners. Please contact Sageful to learn more.

About Sageful Corporation

Sageful efficiency-enhancing technology solutions create powerful command centers where criminal justice, workplace, laboratory and medical users can collect, track, analyze and securely exchange client information. These comprehensive data management solutions include DAT Information Manager™ for corporate, medical and criminal justice drug and alcohol testing programs and Attendee Information Manager™ for community corrections, drug courts, reentry programs, probation and parole. Sageful increases operational efficiency, reduces program risk, and improves donor outcomes. Learn more at www.Sageful.com.

Sageful Client Information Management.

Improving Outcomes. Saving Money.
