News Detail

TrackMyResults for TPAs(TM), A Breakthrough Service That Integrates On-Site Testing With Third Party Administrator Data Management Systems

Today Sageful Corporation announced TrackMyResults for TPAs™, an innovative data management service for third party administrators (TPAs) of corporate drug testing programs. TrackMyResults for TPAs removes the greatest hurdle TPAs face in increasing their use of on-site devices: the inability of these devices to be integrated into TPAs data management & reporting systems. TPAs can finally enjoy on-site testing's instant results, convenience and cost-competitiveness without having to sacrifice their ability to seamlessly track, manage and report all results for their customers. Additionally, TrackMyResults for TPAs creates a "dashboard" from which TPAs can assemble, monitor and manage their providers and customers on a real-time basis.

TrackMyResults for TPAs can easily be deployed and securely used by a wide group of collection and customer sites thanks to its step-by-step wizards and tutorials; built in HIPAA protections; shipping & receiving functionality; and Web interface not requiring software installation. And since TrackMyResults for TPAs can also interface with nearly all clinical laboratories, TPAs can receive an integrated data stream of on-site and lab results (both positives and negatives), as well as donor and electronic chain-of-custody information.

"TrackMyResults for TPAs is a flexible, compelling solution," said Keith Loris, CEO of Sageful Corporation. "Some TPAs will be drawn to its ability to capture and integrate, from dispersed collection sites, the 98% of on-site tests that are typically negative. Others will be attracted by its ability to electronically link all their providers and customers in a comprehensive TPA data management and workflow system, especially one without large capital expenses or support and maintenance charges."

TrackMyResults for TPAs also lowers TPA expenses while improving customer satisfaction through its customer support capabilities. Support representatives, for example, can check the status of specimens in real time (collected, shipped to lab, received by lab, results posted by lab, in medical review, complete & available to client, etc.).

About Sageful Corporation

Sageful's drug testing data management solutions improve outcomes, increase efficiency, reduce liability and increase return on program investment. Criminal justice, work place and medical users can collect, track, analyze and confidentially exchange donor, result, schedule and program information. Sageful's broad line of Web and Windows-based solutions include: TrackMyResults.com™, for the customers of drug testing laboratories and third party administrators; DAT Information Manager™, for corporate drug and alcohol testing programs; and Attendee Information Manager™, for community correction, drug court, probation, parole and reentry programs. Learn more at www.Sageful.com.
